

WATER HYGIENE

Are you adequately protecting your building users from Legionella?

One of the major compliance issues facing the owners and operators of public buildings is the legislation surrounding Legionella control. With high profile prosecutions for failures in Legionella control now frequent events, it has never been more important to protect your building users and business by ensuring a comprehensive compliance regime is in place.

McGill has been established since 1981 and provides a complete water hygiene service to ensure our clients remain compliant with all the legislation surrounding water systems. Our experienced staff and operatives provide a reliable and cost effective solution to water hygiene and Legionella protection requirements.

Combined with our expertise in electrical, heating and plumbing we offer a complete solution to your building services maintenance and compliance requirements.

Do I need a risk assessment?

A suitable legionella risk assessment is required in any commercial premises with hot/cold water services. This includes rented housing stock, offices, care homes, nurseries, dentists, hairdressers, sports clubs, hospitals, schools and factories. Any facility where staff, customers or members of the public can come into contact with Legionella, is potentially at risk.

OUR SERVICES INCLUDE

- ACoP L8 Risk Assessments
- ACoP L8 Water System Monitoring
- ACoP L8 Legionella Control & Water Hygiene Maintenance
- Water Tank Cleaning and Disinfection
- Water System Chlorination
- Thermostatic Mixing Valve Maintenance
- "Dead-leg" Removal

Call us today for free advice on whether your water systems are adequately protected.
